

MERSEN APPLICATION SNAPSHOT: SAFETY UPGRADE... FUSE CONTROL

APPLICATION

Looking for a safety upgrade to your electrical distribution system? If you are interested in...

1. Limiting arc flash potential and reducing hazard risk categories...
2. Inventory reduction and cleaning your storeroom of older, less effective and obsolete fuses...
3. Decreasing downtime by having the right fuse, in stock, when you need it...
4. Looking to save money and time by reducing bin locations and other logistical costs associated with inventory replenishment...

...then take advantage of Mersen's FUSE CONTROL inventory management program!

PRODUCT OVERVIEW

Fuse Control is a simple, yet effective way to analyze your existing fuse and fuse accessory requirements, providing you the information you need to upgrade and better manage your inventory. A Fuse Control analysis is a comprehensive program that identifies the safest, most current limiting alternatives available for your equipment and, at the same time, provides a template to reduce your total cost of ownership.

SOLUTIONS

Ideal for:

- Manufacturing locations.
- Hospitals
- School and Universities
- Corporate campus environments
- Any facility that inventories and uses fuses

HOW DO I START?

Here's how you can Receive a free Fuse control analysis:

1. Provide your authorized Mersen distributor with a current fuse and fuse accessory inventory list (excel format preferred).
2. Include all products including competitive inventory that need to be evaluated.
3. Mersen will do the rest!
